proLogistik Group Hardware Innovative technologies

As part of proLogistik group of companies, we are representing innovative hardware technologies and excellent know-how as a hardware business unit. proLogistik hardware considers itself a “full service provider” with the target of precisely understanding your requirements, developing solutions, and delivering precisely fitting products. Beyond this, our range comprises innovative software apps, professional service, and customised procurement models.

We bundle the competences of more than 500 employees in warehouse, transportation, hardware, and consulting. Even now, any happy customers are profiting from consistently optimised supply-chain solutions.

proLogistik Group is supporting you in hardware selection, commissioning, design, and repair. Our hardware products for the areas of warehouse and logistics, foodstuffs, hygiene, and pharmaceuticals as well as production and manufacture comprise industrial PCs, voice clients, smartphone scanning, mobile computing, barcode scanners, tablets, mobile printers, labels and accessories, Wi-Fi networks, as well as hardware administration with Profiserve and repair service in Germany and in Switzerland.

Stacker terminals for smooth control in the warehouse

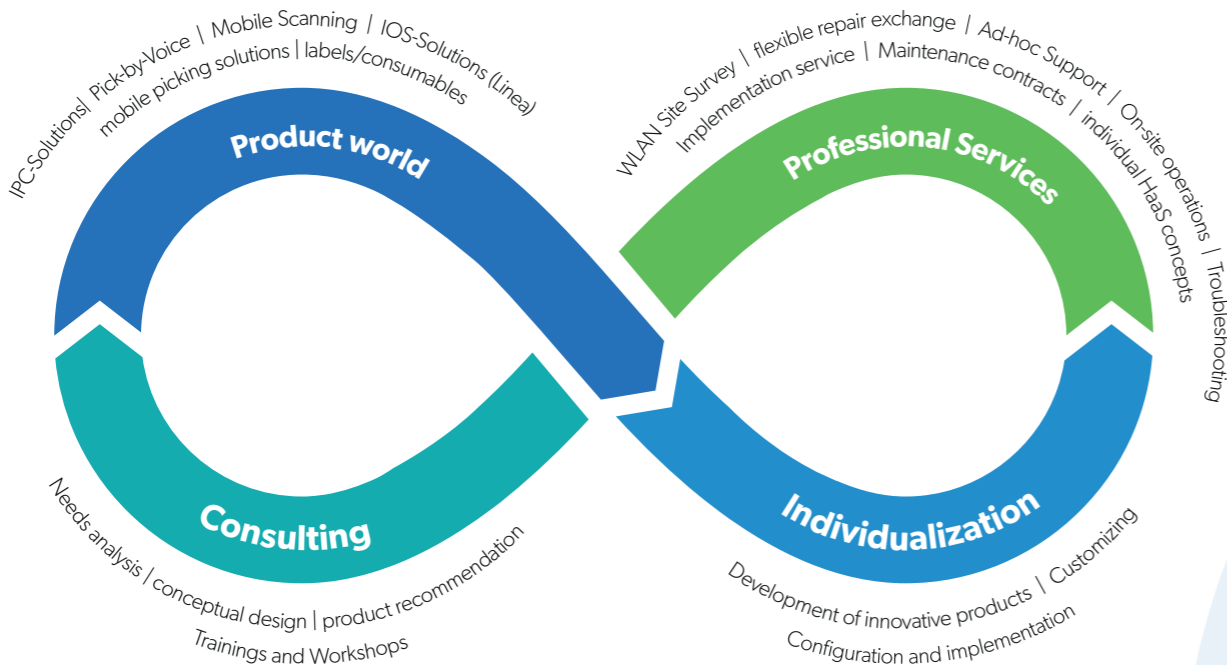

Do you want mobile access to your warehouse management software at any time? We have the solution you need. Our forklift terminal can be easily attached to all forklifts and industrial trucks with a holder, to ensure smooth operation in the warehouse. The particularly robust build enables this stacker terminal to withstand even strong vibration and temperature differences easily. The capacitive multi-touch technology also permits optimal operation with gloves. Keep your warehouse processes always in view with our forklift terminal.

Industrial PC solutions

Are you looking for a stainless-steel PC developed specifically for hygienically sensitive uses in food processing and for pharmaceutical and clinical applications?

Get to know the pro-V-pad STEEL IP69k!

Use of gloves in everyday work is generally indispensable in manufacture and production environments. They are no problem at all for the pro-V-pad STEEL IP65. The multi-finger touchscreen offers greatest operating comfort even while wearing work gloves. The version in protection class IP69k is also water-tight and absolutely robust. The corrosion-resistant stainless-steel casings made of V2A/V4A prevents ingress of dirt and can be treated with strong detergents, acidic and alkali disinfectants alike.

Intralogistics

Hardware design, development, customising, and production in Germany.

Service concepts

Flexible and convincing hardware service concepts.

Repair-Center

Hardware Repair-Center – local, quick and efficient repair service.

Hardware as a Service (HaaS)

You can rent hardware from us instead of buying it! Profit from our all-round service package.

proLogistik Group Hardware Technology range

Smartphone Scanning

Just a few steps will turn your smartphone into an industrial mobile data recording device. The scan sleeves will give you a high-performance, user-friendly, and cost-efficient alternative for other barcode scanners. Quick and simple system adjustments as well as integration of browser-based apps are possible at all times.

Picking solutions

A modern wearable scanning solution (computer technologies that can be worn on the body) will optimise your picking processes while minimising the error rate. Hands-free scanning solutions will facilitate your work steps and increase productivity. We are authorised dealers of renowned manufacturers.

Workstations

Our mobile workstation makes you flexible and offers a workstation that fits precisely for any application, while the four rotating castors ensure maximum mobility and agility. The hand cart can be customised and varied in equipment and set-up. It can be adjusted to requirements. We also offer the matching hardware, such as on-board computers, printers, scanners with holders and battery boxes.

Comprehensive repair service

The employees of our dedicated repair centres in Dortmund and Zürich are available to restore smooth operation in your warehouse after hardware defects. We repair all brands and devices quickly and easily. We also test, configure, and send out all devices in "ready to use" condition. Our service is adjusted to your needs – world-wide.

Speech-controlled work processes with pro-Voice

Pick-by-Voice technology permits great reliability in picking. The order picker's inputs and instructions are given by speech-controlled dialogue system. The hands-free voice solution clearly increases productivity and speed in the warehouse. At the same time, the personal voice assistant reduces the error rate. In combination with our warehouse management system, we offer dedicated voice engine technologies and voice terminals that we produce, develop, and integrate.

Labels

Adjusted to your respective wishes, it is always possible to make special productions for your label. Location labels, PID labels, deep-freeze labels, plastic labels, magnetic labels, reflector labels, or e-papers – we produce and sell labels for many different applications.

Printers

A high-performance label and voucher printer will let you label your products quickly and easily. Labelling devices can be small, practical, and mobile, perfectly suitable for use in the office. Larger label printers that are firmly mounted on a workstation are also often used in production, logistics, and trade, supporting employees in everyday work. proLogistik Group has a broad offering of mobile and stationary label printers that comply with your needs.

Wi-Fi network – fault-free and quick

Easily performing radio-controlled intralogistics work thanks to optimal signal field strength, signal-noise ratio, and interferences. A site survey analysis is the first step to achieve optimal and seamless supply across the entire area in your company. We will gladly advise you on the selection of a suitable Wi-Fi standard.
