

Warehouse & Transport Management System

How to accelerate your supply chain and reduce complexity with seamless processes.

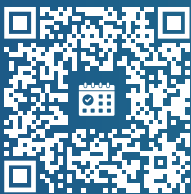

Transform your Supply Chain into a real Competitive Advantage.

We connect your processes so intelligently that technology stays in the background and your productivity comes into focus:

- ④ **Real-time Transparency**
You always know exactly where your goods are and what your actual inventory levels are.
- ④ **Seamless Data Flow:** Your systems work hand in hand. Information is automatically passed from one area to the next.
- ④ **Scalable Flexibility:** Your software adapts to your business – not the other way around. As your company grows, our solution simply grows with it – without expensive reimplementation.
- ④ **Intuitive User Guidance:** The software guides employees through tasks. This makes you independent of expert knowledge and shortens the onboarding time for new colleagues.
- ④ **Decision Certainty:** A valid data foundation replaces gut feeling with clear, fact-based analyses.

Is this your goal?

Let us discuss your requirements.

Supply Chain Platform proLogistik NEO

You will find warehouse and transport software,
BI, and AI assistance in one interface.

Say goodbye to logging in and out of different programs. With the proLogistik NEO platform, we centralize all applications. This means maximum overview and minimal administrative effort for you.

Highlights for Your Daily Work:

- ➔ **Single Sign-On:** Log in once, access all booked modules.
- ➔ **Central Master Data:** An item is created once and is immediately available in Warehouse (WMS) and Transport (TMS).
- ➔ **Intelligent Support:** Ask questions like a colleague: "How many returns were there today?" – NEO answers and provides insights directly in the AI chat.
- ➔ **ERP and Third-Party Integration:** Data transfer doesn't stop with us. We integrate your existing ERP systems and third-party systems.
- ➔ **Security:** Hosting in dedicated data centers in Germany. Your data remains secure and GDPR-compliant.

Software Modules: A Building Block That Adapts to You.

No company is like another. That's why our software is modular.

It perfectly fits the products that solve your current pain points. If your requirements change, you can easily add more modules. You only pay for what you use.

Quick Overview: What is included in WMS, TMS, and the hardware offering?

Warehouse Management (WMS):

From goods receiving to automated storage solutions like AutoStore and high-bay racking, to picking, packing, and shipping: All processes are interconnected and optimized with industry-specific solutions for 3PL, manufacturing, e-commerce, wholesale, and retail with comprehensive customization.

Transport Management (TMS):

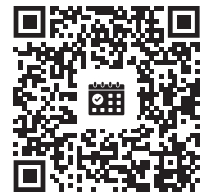

From customer portals to route planning, telematics with configurable workflows for the driver app, and digital freight documents (eCMR), to the integration of speech AI for real-time tracking and transport route optimization across multiple industries, including FTL, LTL, intermodal, mobility, and logistics.

Hardware & Service – Everything from a Single Source:

Reliable software needs high-performance hardware. As one of the few providers, we develop and manufacture our industrial PCs (IPCs) ourselves – directly in Dortmund. Our purpose-built IPCs from the pro-v-pad series are at the heart of our hardware and ensure maximum reliability, durability, and performance.

In the proLogistik Group, we combine the expertise of strong companies with long-term logistics experience.

Let us show you how we can simplify your processes. In an obligation-free consultation, we will analyze your current situation and show you untapped potential – honestly and directly.

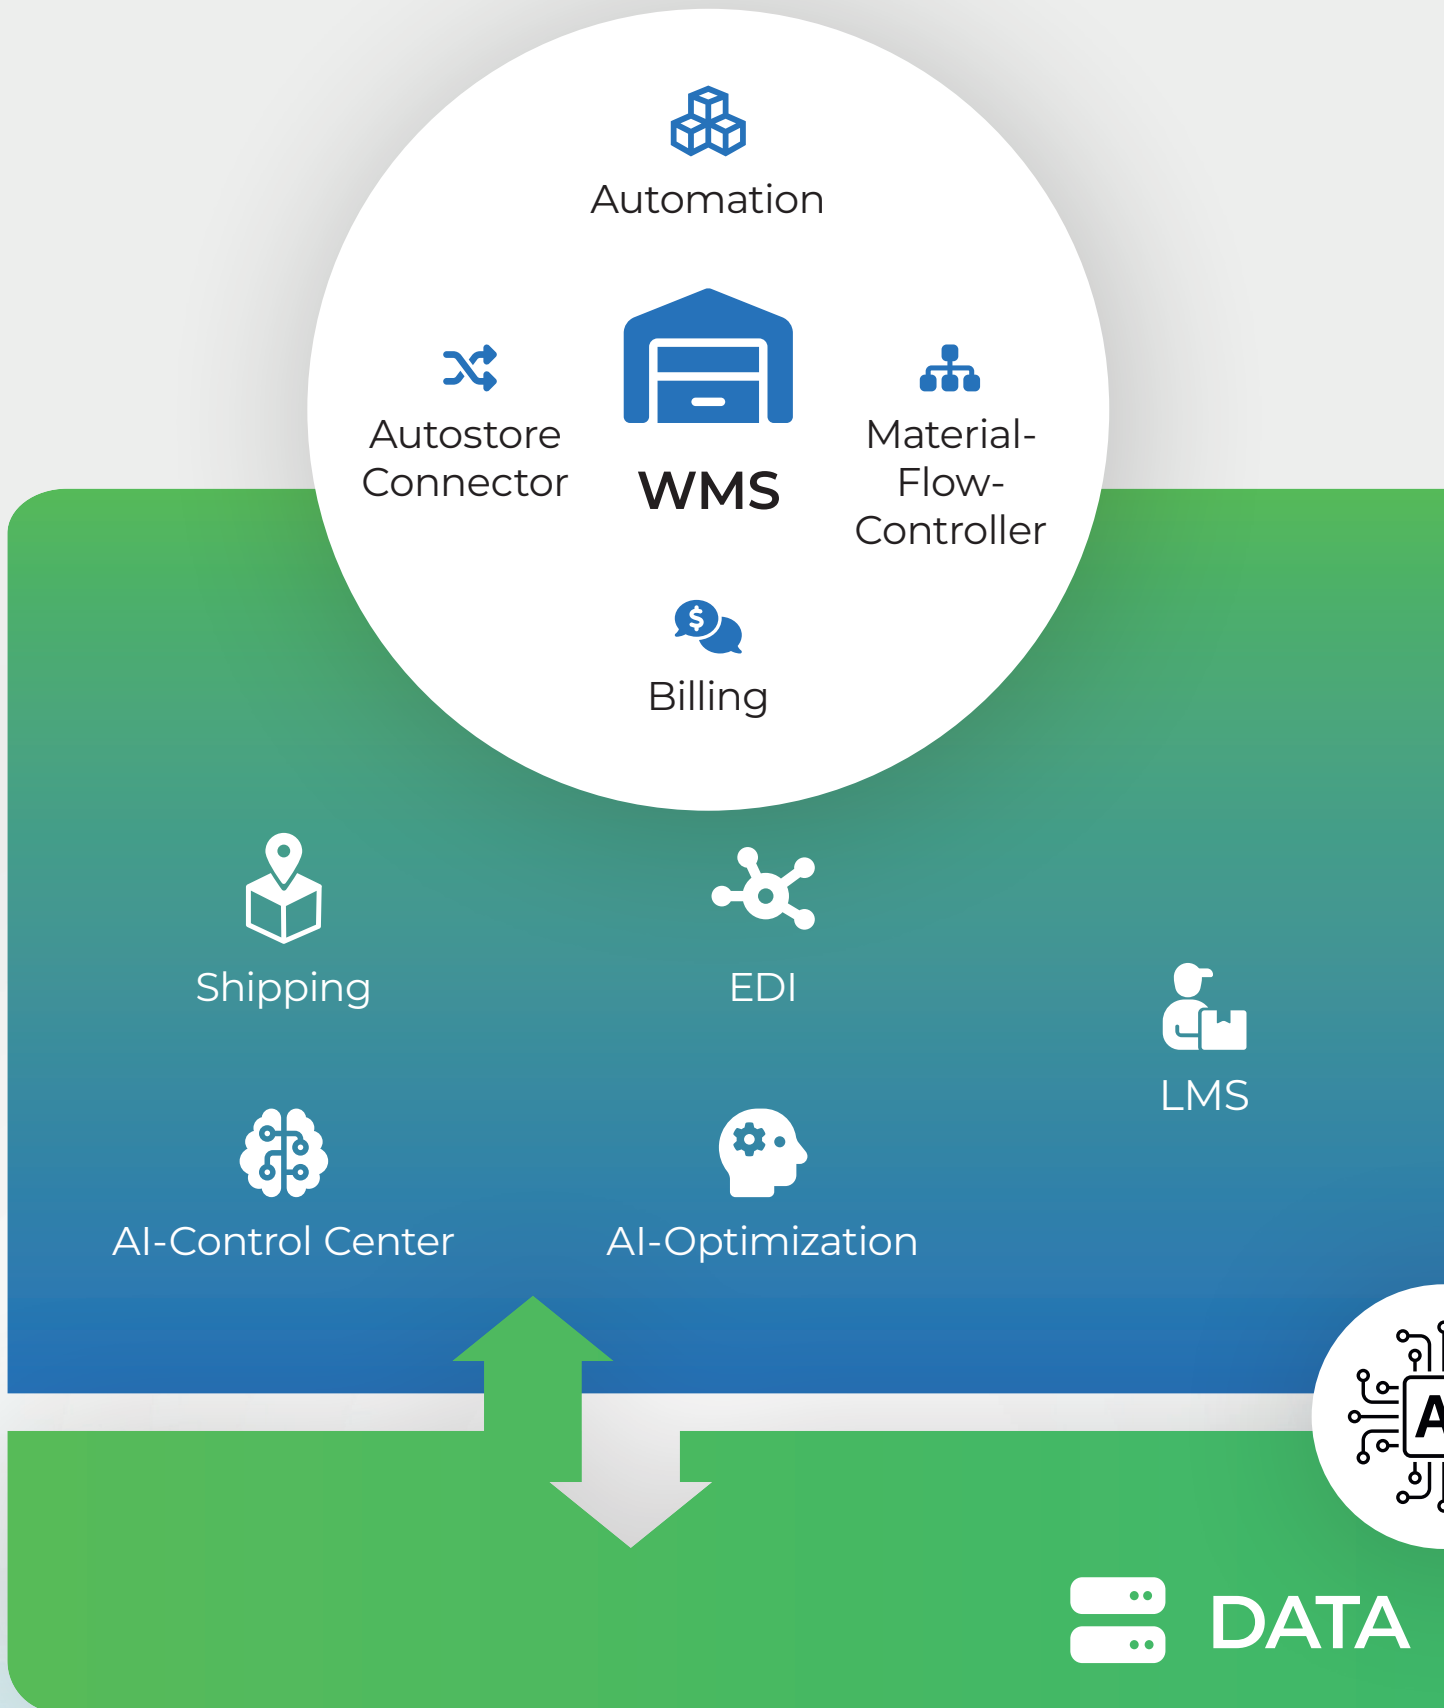

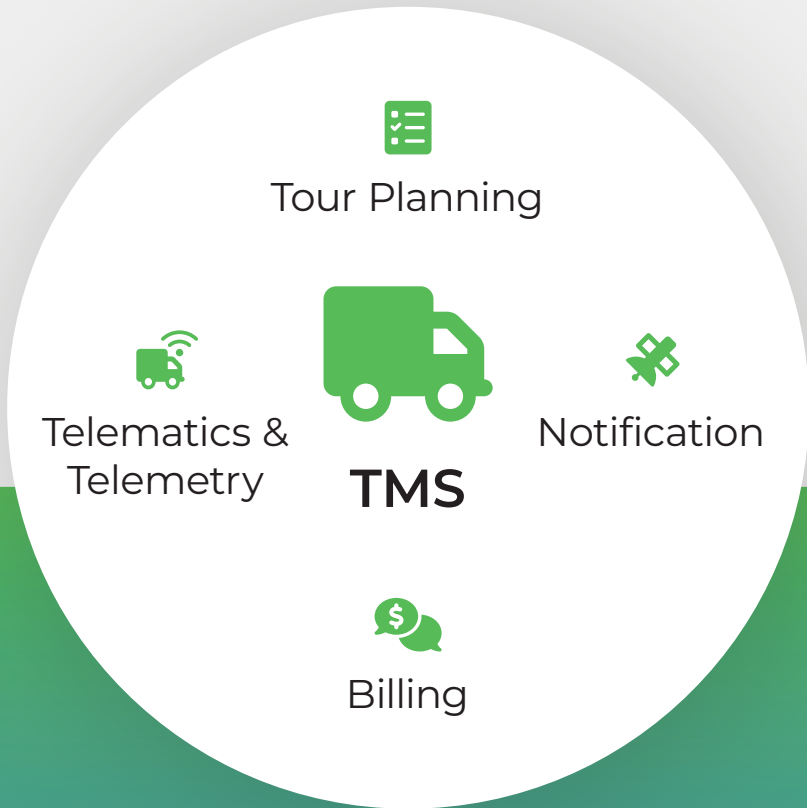

Are you from a different industry?

Our portfolio is distinguished by high adaptability. Schedule a meeting for individual advice tailored to your needs.

Solutions for Your Needs

On the proLogistik NEO platform, we integrate our solutions into a seamless system supported by AI – covering the entire supply chain, from warehouse and automation to transport and billing – for maximum transparency, efficiency, and control.

Warehouse Management System

The proLogistik WMS combines a high-performance core with seamless ERP integration (e.g., SAP, Infor, Microsoft Dynamics) and offers standardized interfaces for 3PL, manufacturing, e-commerce, and wholesale as well as comprehensive customization.

Autostore Connector

The proLogistik Group offers direct integration with Autostore: The proLogistik WMS communicates immediately with the automatic small parts storage system – no separate sub-WMS required.

Automation & Material flow

The Automation module connects various automation solutions directly with your WMS and ensures an efficient flow of materials, as well as a clear separation of processes for maximum material flow performance.

Business Intelligence

proLogistik BI analyzes your business KPIs in real-time, integrates diverse data sources, and supports data-driven decisions with interactive dashboards, self-service functions, and automated reporting.

Labour Management System

Maximize transparency of employee costs through intelligent links to performance, process, and HR data in real-time monitoring. Data-based planning, precise cost control, and realistic forecasts for efficient workforce management.

Transport Management System

Our TMS manages the entire transport process in real-time – from the first mile to the last mile – and integrates external service providers seamlessly into your IT infrastructure. Optimized for freight, FTL/LTL, intermodal, containers, mobility logistics, and wholesale.

Route Planning & Telematics

The AI-powered route optimization ensures efficient planning and optimal use of your fleet. With the driver app, you can easily and transparently track transport processes based on real-time data for orders, vehicles, and ETAs.

Customer Portal

Optimize your order process by reducing manual data entry and integrating your customers into the web-based platform, thereby increasing efficiency and data quality while closing existing EDI gaps reliably.

Notification

All appointment scheduling for deliveries and returns is done automatically. Notifications are sent via SMS, email, WhatsApp, or voice AI, and real-time tracking of shipments is available.

Dock- & Yardmanagement

Our solution links the management of order and loading units with incoming and outgoing shipments – optimizing both the inbound flow to your yard and the removal of goods from the ramp.

Data Warehouse

proLogistik Data Warehouse is the central data hub for proLogistik NEO. It integrates data from WMS, TMS, as well as ERP, CRM, and MES systems, creating a unified, high-quality data repository.

It forms the basis for BI and AI-powered recommendations – with key performance indicators, trend analyses, and data quality insights for the entire supply chain.

Our Industry Solutions

Warehouse Sector

- ⊕ **Food & Freshness (Food):** Batch traceability, expiration date control, temperature.
- ⊕ **Wholesale & Construction:** Handling of oversized goods, complex assortments, counter sales.
- ⊕ **Industry & Production:** Just-in-time supply, production integration.
- ⊕ **Healthcare & Pharma:** Validation requirements, sensitive goods.
- ⊕ **3PL & Services:** Customer adaptability, seamless onboarding for new clients.
- ⊕ **E-Commerce:** Integrated interfaces to shops, marketplaces, payment, and shipping service providers, ERP, and accounting systems.

Transport Sector

- ⊕ **Freight & Bulk:** Automated dispatch, shipment tracking, integrated billing.
- ⊕ **Transport Economy:** Freight cost control, carrier integration.
- ⊕ **Construction & Bulk:** Construction logistics, silo management.
- ⊕ **Mobility Logistics:** 2-man handling, planning for assembly services.
- ⊕ **Container Logistics:** Slot management, container tracking, chassis dispatch.
- ⊕ **Intermodal Transport:** Traffic management, terminal integration.
- ⊕ **Beverages & Food:** Goods management, temperature recording.

Hardware

In addition, we offer a comprehensive hardware portfolio from leading manufacturers and our own production, „Made in Germany“:

- ⊕ **Industrial PCs & Docking Stations**
- ⊕ **Warehouse and Commissioning Carts, Load and Handling Equipment, Power Supplies**
- ⊕ **Pick-by-Voice Solutions**
- ⊕ **Scanner & Mobile Computing:** Handhelds, Barcode Scanners.
- ⊕ **Label Printers**

The proLogistik Group invests over 4,000 personnel annually into product development – with a clear goal: to provide our customers with continuous innovations, developments, and noticeable improvements in everyday logistics processes.

Whether new features, optimized workflows, better performance, or the integration of current technologies: Our solutions work with your customers to meet the requirements of modern logistics processes.

This ensures that our customers work not only with stable software but also benefit from a product that continues to be developed and offers them a competitive advantage.
